

ONE CLAIM · ONE PERSON · ONE ACTION

I build production software that replaces paper processes—even where the internet doesn’t reach.

The portfolio proves this to an operations manager, then helps them turn a manual process into a scoped project inquiry.

Proof-gathering groups

Every section earns the next click.

The portfolio is a single-page scroll. Each section functions as a page and moves the same visitor toward the same final action.

Scope

Contact

HERO

01

The claim lands first.

1. Availability
2. One-line claim
3. Supporting sentence
4. 50+ · offline-first · 70%+ · still supported

Case: DG Cement proof strip.

See the field proof

PROOF

02

Paid field work leads.

1. Paper-register problem
2. Offline-first decision
3. Measured result
4. Paraphrased quote
5. Failure + ongoing support

Case: DG Cement — 28 endpoints, zero outage data loss.

See the systems behind the claim

SELECTED WORK

03

Operations before depth.

1. Operations systems
2. Data systems
3. AI depth
4. View-all archive

Cases: Inventory leads; then AI Core, Customer Trends, Expense Tracker, Global Sales, AURA, DataSage.

See how I deliver

HOW I WORK

04

Remove the delivery fear.

1. Understand the process
2. Define failure conditions
3. Build for the environment
4. Test and hand over
5. Keep supporting

Proof: DG Cement's failed first sync and continued support.

Scope your process

Turn interest into a useful brief.

1. Current process
2. People affected
3. Failure or delay
4. Environment constraints
5. Desired outcome
6. Inquiry preview

Case: none. The interaction does the work.

Build my project inquiry

Make the one ask.

1. Direct invitation
2. Two-working-day reply
3. Editable message
4. Credentials in one line
5. Real portrait

Destination: a pre-filled email, not a generic contact form.

Email me a project inquiry

Different readiness. One destination.

Early CTAs ask for attention. Middle CTAs build confidence and scope. Only the final CTA asks for contact.

The strongest work leads.

Paid field proof comes first. Operations relevance follows. AI work adds technical depth without becoming the headline.

PORTFOLIO LEAD

DG Cement

Paid production system · 50+ workers · offline-first · 70%+ less payroll processing time.

01 · Inventory	Closest operations match
02 · The AI Core	Current internship engineering proof
03 · Customer Trends	Auditable data work
04 · Expense Tracker	Small, honest adoption
05 · Global Sales	Dashboard + forecasting
06 · AURA	LangGraph reliability depth
07 · DataSage	Structured EDA workflow

Missing proof stays visible.

The build should never stop to discover that a flagship capture, permission, or link was only assumed.

REQUIRED DG Cement captures Attendance, offline state, and payroll screens with names, CNICs, wages, and client-sensitive data removed.	REQUIRED Testimonial permission Confirm the final paraphrase and the anonymous attribution before publishing it.
REQUIRED Inventory + AURA Direct product captures using safe data. No faux desktop or generic chat stand-ins.	REQUIRED Links audit Confirm public/private status for every repo and demo. Never ship a dead or misleading button.
USEFUL Supporting evidence DataSage result state, exact public dataset sources, and a private/redacted DG Cement walkthrough decision.	ONGOING Internship work Add the AI Core repo/demo only when stable. Refresh its 51-test capture if the count changes.

Ten options. One survived.

AI widened the field. Sara chose the line that was specific, defensible, and connected to the strongest case.

1. I build business software that works where the work happens.	2. I replace manual business processes with software teams can rely on.
3. I turn paper workflows into production systems.	4. I build offline-first tools for operations that cannot stop.
5. I make fragile manual processes measurable, reliable, and digital.	6. I build the software behind smoother day-to-day operations.
7. I turn registers and spreadsheets into working business systems.	8. I ship practical software for teams working beyond reliable internet.
9. I build production systems for the processes businesses still run by hand.	

CHOSEN

I build production software that replaces paper processes—even where the internet doesn’t reach.

Why this one: “Production” rules out demos. “Replaces paper processes” names the work. The final clause makes the real DG Cement constraint memorable without promoting AI work into the headline.

Pass / revise

- ✓ Single memorable claim
- ✓ Strongest work leads
- ✓ Every page has an ordered CTA
- ✓ One Week 1 action
- ✓ Honest gather-list
